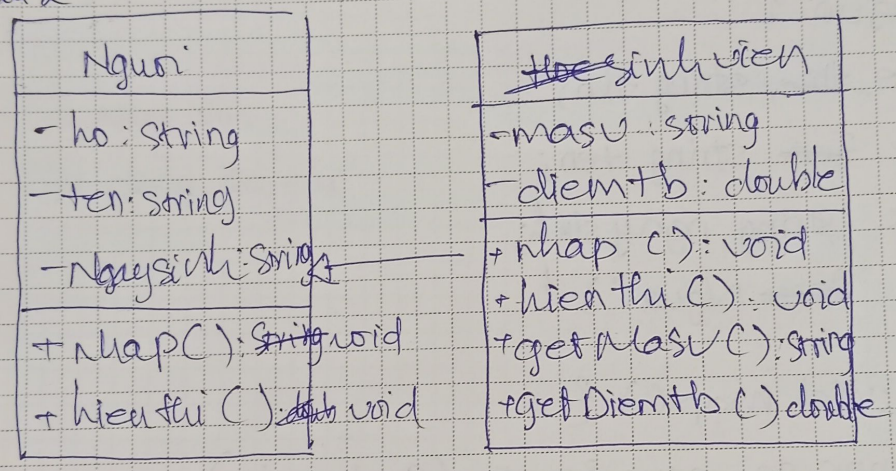
```
}
public static void main(String[] args) {
    Người n = new Người();
    n.nhap();
    System.out.out.println("thông tin");
    n.hienthi();
    }
}
```

Câu 2



Đoạn đầu như câu 1.

```
class sinhvienextend Người {
    private String masv;
    private double diemtb;
    @Override
    public void nhap() {
        Scanner sc = new Scanner(System.in)
        super.Nhap();
        System.out.println("Nhap ma sv: ");
        masv. = sc.nextLine();
```

```
System.out.println("Nhap diem tb: ")
    diemtb = sc.nextDouble();
@Override
public void hienthi(){
    super.hienthi();
    System.out.println("Ma sv: "+masv);
    System.out.println("Diem tb: "+diemtb);
}
public String getMasv(){
    return this.masv;
}
public double getdiemtb(){
    return this.diemtb;
}
public class Main {
    public Static void mai(String [] args){
        ~~Hoesinh sv~~ Sinhvien sv = new Sinhvien();
        sv.nhap()
        System.out.println("Thong tin sinh vien");
        sv.hienthi();
        System.out.println("Hienthi ma sv:" + sv.getmasv());
        System.out.println("Hienthi diem tb: "+ sv.getdiemtb());
    }
}
```

Câu 3

```
public double getdiemtb(){
    return diemtb;
```
